**NOTE:** Mathematical standards are interwoven and should be addressed throughout the year in as many different units and tasks as possible in order to stress the natural connections that exist among mathematical topics.

*Prioritized Standards are noted in RED*

**Grades 3-5 Key:** G = Geometry, MD=Measurement and Data, NBT= Number and Operations in Base Ten, NF = Number and Operations, Fractions, OA = Operations and Algebraic Thinking.

<tr>
<td>1 Make sense of problems and persevere in solving them.</td>
<td>Represent and interpret data.</td>
<td>Solve problems involving measurement and estimation of intervals of time, liquid volumes, and masses of objects.</td>
<td>Generalize place value understanding for multi-digit whole numbers.</td>
<td></td>
</tr>
<tr>
<td>2 Reason abstractly and quantitatively.</td>
<td>Geometry</td>
<td>Develop understanding of fractions as numbers.</td>
<td>MGSE4.NBT.1 Recognize that in a multi-digit whole number, a digit in any one place represents ten times what it represents in the place to its right. For example, recognize that 700 ÷ 70 = 10 by applying concepts of place value and division.</td>
<td></td>
</tr>
<tr>
<td>3 Construct viable arguments and critique the reasoning of others.</td>
<td>Representing and Comparing Fractions</td>
<td>MGSE3.NF.1 Understand a fraction ( \frac{1}{b} ) as the quantity formed by 1 part when a whole is partitioned into ( b ) equal parts (unit fraction); understand a fraction ( \frac{a}{b} ) as the quantity formed by ( a ) parts of size ( \frac{1}{b} ). For example, ( \frac{2}{4} ) means there are ( 2 ) ( \frac{1}{4} ) parts, so ( \frac{2}{4} = \frac{1}{4} + \frac{1}{4} ).</td>
<td>MGSE4.NBT.2 Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using &gt;, =, and &lt; symbols to record the results of comparisons.</td>
<td></td>
</tr>
<tr>
<td>4 Model with mathematics.</td>
<td></td>
<td>MGSE3.NF.2 Understand a fraction as a number on the number line; represent fractions on a number line diagram.</td>
<td>MGSE4.NBT.3 Use place value understanding to round multi-digit whole numbers to any place.</td>
<td></td>
</tr>
<tr>
<td>5 Use appropriate tools strategically.</td>
<td></td>
<td>a. Represent a fraction ( \frac{1}{b} ) on a number line diagram by defining the interval from 0 to 1 as the whole and partitioning it into ( b ) equal parts. Recognize that each part has size ( \frac{1}{b} ). Recognize that a unit fraction ( \frac{1}{b} ) is located ( \frac{1}{b} ) whole unit from 0 on the number line.</td>
<td>Use place value understanding and properties of operations to perform multi-digit arithmetic.</td>
<td></td>
</tr>
<tr>
<td>6 Attend to precision.</td>
<td></td>
<td>b. Represent a non-unit fraction ( \frac{a}{b} ) on a number line diagram by marking off ( a ) lengths of ( \frac{1}{b} ) (unit fractions) from 0. Recognize that the resulting interval has size ( \frac{a}{b} ) and that its</td>
<td>MGSE4.NBT.4 Fluently add and subtract multi-digit whole numbers using the standard algorithm.</td>
<td></td>
</tr>
<tr>
<td>7 Look for and make use of structure.</td>
<td></td>

</tbody>
</table>

1 Excludes compound units such as cm\(^3\) and finding the geometric volume of a container.

2 Excludes multiplicative comparison problems (problems involving notions of “times as much”; see Glossary, Table 2).
| Area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths.
| Multiply side lengths to find areas of rectangles with whole-number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.
| Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths $a$ and $b + c$ is the sum of $a \times b$ and $a \times c$. Use area models to represent the distributive property in mathematical reasoning.
| Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real-world problems.

**Geometric measurement:** recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.

MGSE3.MD.8 Solve real-world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

| Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths. MGSE3.NF.3 Explain equivalence of fractions in special cases, and compare fractions by reasoning about their size.
| Multiply side lengths to find areas of rectangles with whole-number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.
| Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths $a$ and $b + c$ is the sum of $a \times b$ and $a \times c$. Use area models to represent the distributive property in mathematical reasoning.

**Geometric measurement:** recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.

MGSE3.MD.8 Solve real-world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

| halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters.
| halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters.

**Represent and interpret data.**

MGSE3.MD.3 Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step “how many more” and “how many less” problems using information presented in scaled bar graphs. For example, draw a bar graph in which each square in the bar graph might represent 5 pets.

MGSE3.MD.4 Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units—whole numbers, halves, or quarters.

**Represent and interpret data.**

MGSE3.MD.3 Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. ## 3.2 Curriculum Map

### Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

| Use the four operations with whole numbers to solve problems. **MGSE4.OA.1** Understand that a multiplicative comparison is a situation in which one quantity is multiplied by a specified number to get another quantity.  
  a. Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5.  
  b. Represent verbal statements of multiplicative comparisons as multiplication equations. **MGSE4.OA.2** Multiply or divide to solve word problems involving multiplicative comparison. Use drawings and equations with a symbol or letter for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison. 3  
  **MGSE4.OA.3** Solve multistep word problems with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a symbol or letter standing for the unknown quantity. Assess the reasonableness of answers using
| Extend understanding of fraction equivalence and ordering. **MGSE4.NF.1** Explain why two or more fractions are equivalent $\frac{a}{b} = \frac{n \times a}{n \times b}$ ex: $\frac{1}{4} = \frac{2 \times 1}{2 \times 4}$ by using fraction models. Focus attention on how the number and size of the parts differ even though the fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions. **MGSE4.NF.2** Compare two fractions with different numerators and different denominators, e.g., by using different fraction models, by creating common denominators or numerators, or by comparing to a benchmark fraction such as $\frac{1}{2}$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols $>$, $=$, or $<$, and justify the conclusions. **MGSE4.MD.2** Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.
| Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers. **MGSE4.NF.3** Understand a fraction $\frac{a}{b}$ with $a > 1$ as a sum of unit fractions $\frac{1}{b}$.  
  a. Understand addition and subtraction of fractions as joining and separating parts referring to the same whole.  
  b. Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model.  
  Examples: $\frac{3}{8} = \frac{1}{8} + \frac{1}{8} + \frac{1}{8}$; $\frac{3}{8} = \frac{1}{8} + \frac{2}{8}$; $2 \frac{1}{8} = \frac{1}{8} + \frac{1}{8} = \frac{8}{8} + \frac{8}{8} + \frac{1}{8}$.  
  c. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.  
  d. Solve word problems involving addition and subtraction of fractions referring to the same whole and

---

3 See Glossary, Table 2.
Gain familiarity with factors and multiples.
MGSE4.OA.4 Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.

Generate and analyze patterns.
MGSE4.OA.5 Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. For example, given the rule “Add 3” and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers.

Generalize place value understanding for multi-digit whole numbers.
MGSE4.NBT.5 Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

MGSE4.NBT.6 Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

MGSE4.MD.2 Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.
quantities using diagrams such as number line diagrams that feature a measurement scale.

**MGSE4.MD.8** Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real world problems.
