

David P. Holland, MD, MHS

Overview

Dr. Holland is an Associate Professor at Emory in the School of Medicine (Department of Medicine, Division of Infectious Diseases) who also serves as the Chief Clinical Officer for the Fulton County Board of Health. His research aims at improving the efficiency of clinical trials and finding innovations in public health initiatives. His previous projects have focused on the use of decision analysis in the planning phase of clinical trials in an effort to identify the most economically viable potential regimens prior to conducting large-scale studies. In particular, he collaborated with scientists and economists from the Centers for Disease Control and Prevention on cost-effectiveness analyses that have informed current guidelines for the treatment of latent tuberculosis infection and identified areas for future research that are of high value to current policymakers. His clinical interests include treatment and prevention of tuberculosis, sexually transmitted infections, and HIV infection (including pre-exposure prophylaxis).

Academic Appointment

- Senior Physician, Emory University School of Medicine
- Associate Professor, Medicine, Emory University

Education

Degrees

- MD from Emory University
- MHS from Duke University
- BS from Millsaps College
