

DISCOVER EARTH and SPACE

After-School Program

Discover Earth and Space is an after-school science enrichment program where kids explore the outer reaches of the universe to the bottom of the oceans as we investigate processes that affect the Earth's surface, explore the celestial bodies in our solar system, and learn how we study ocean and space. Each class involves hands-on experiments and activities developed by scientists and educators. We investigate characteristics of rocks and minerals as we crack open geodes, learn how landforms change over time, make models of our solar system, explore comets and meteors, learn how we study space, design and build space rovers, and more.
