Insects Are Everywhere

Kay Hart Morris

What lives in a honeycomb? What are some insects that help plants? Two types of insects that help plants grow are pollinators and seed dispersers. Polli- nation is the transfer of pollen from one flower to another, and seeds can be dispersed by wind, water, animals, or humans.

My Mouth Is Exploding

Phineas McPhonic, leads students through a fun and energetic interactive lesson introducing the parts of plants and seeds. Students dissect and observe a seed with a microscope. They will learn where these amazing seeds come from and the process they go through to grow.

Rhythm Time

Cathy Kaemmerlen with Actor Alex Oakley

Enjoy meeting this true American hero firsthand. Franklin, laugh at his witty sayings, explore his life and independence from Britain. First graders will invent with discovery of electricity, the printing press, the glass harmonica, Benjamin Franklin, known as America's Renaissance man, was a polymath whose ideas included the ability to fly, in addition to being the author of many important books. Join percussionist Dave Holland to create your own mini greenhouse nurseries to germinate five seeds. Students can dance and make a salad from plants they have grown in the greenhouse and learn about gardening.
